DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 and 22-35, drawn to a broadcast media receiver, classified in class 455, subclass 3.02.
 - II. Claims 14-16, drawn to a broadcast media transmitter, classified in class 455, subclass 41.3.
 - III. Claims 17-21, drawn to mobile communication device comprising a transmitter receiver unit, classified in class 455, subclass 73.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as receiving first and second data streams over a first communication channel, separating the second data stream from the first data stream, communicating with mobile communication devices within a short range wireless network using a second communication channel, detecting a mobile communication device present on the local wireless network, determining a device type or configuration thereof, and delivering a third data stream comprising at least part of said second data stream to mobile communication devices according to the determined device type and/or configuration; subcombination II is about transmitting a first data stream of

broadcast media and at least one second data stream, over a broadcast communication channel, to a plurality of broadcast media receivers, the at least one second data stream including at least one flag indicating a class of mobile communication devices to which at least a part of the second data stream relates; and subcombination III is about communicating with a broadcast media receiver in a short range wireless network using a second communication channel, receiving a request for identification of a device type and/or configuration of the mobile communication device, responding to said broadcast media receiver, receiving a data stream from the broadcast media receiver customized to said indicated device type and/or configuration. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
